

Baffle Bags

We specialize in manufacturing premium-quality Baffle Bags, designed to provide maximum stability and efficient space utilization during storage and transportation. Our Baffle Bags, also known as Q Bags, are engineered with reinforced internal baffles that maintain the bag's cubic shape, preventing bulging and ensuring optimal stacking.

Key points about FIBC baffle bags:

Structure:

Internal baffles, typically made of the same fabric as the bag, are sewn into the corners to create a rigid, square shape.

Benefits:

Increased Storage Capacity: Due to their stable shape, baffle bags maximize warehouse space utilization.

Improved Stackability: The square profile allows for secure stacking without shifting or bulging, minimizing the risk of damage.

Reduced Spillage: The rigid structure helps prevent leaks and spills during transport and handling.

Efficient Logistics: Optimized storage and transportation due to consistent shape and volume.
